COURSE OBJECTIVE

The objective of this course of 3 days, is to provide the attendees with a deep theoretical knowledge but more important with a deep hands-on experience on the management of provisional restorations for single tooth implants in the esthetic zone in order to maximize the peri-implant soft tissue esthetics around the final restorations – critical element for achieving gingival integration and esthetic success. In this course 2 live surgeries will be performed by Dr. Gamborena placing an implant in the esthetic zone either immediate and staged. Attendees will learn to harvest tissue for connective tissue grafts as well as different suture techniques. A clinical case will be selected to perform the provisional as well as the implant abutment by the participants involved in this course. The idea behind this set up is to provide to the participants with a real solution into a real case in which the attendees will experience the laboratory intricacies as well as the surgical implications and clinical adjustments performed chair-side later on by Dr. Gamborena. A prosthetic and a surgical hands on workshops will be performed by the attendees in order to have a global experience in this type of high advance implant esthetic courses.

LIVE SURGERIES

day 2

TWO
WORKSHOPS

day 3

- 09:00 -10:30 **lecture I : new trends & concepts treating single tooth implants**
 - Immediate implant placement criteria & concept
 - tooth extraction / alternatives
 - ideal implant placement & 3D bone packing
 - Abutment selection & prosthetic protocol
 - soft tissue grafting technique
- **10:30 -11:00 coffee break**
- 11:00 -13:30 **lecture I : new trends & concepts treating single tooth implants**
- **13:30 -15:00 lunch**
- 15:00 -17:00 **hands-on I:** decisions process for the prosthetic protocol on immediate implant placement abutment & provisional crown, wax-up, silicone indexes, implant placement, ...
- **17:00 -17:15 coffee break**
- 17:15 -19:00 **hands-on I:** decisions process for the prosthetic protocol on immediate implant placement abutment & provisional crown emergence profile configuration, abutment fabrication,...

day
1

- 09:00 -10:30 **live surgery 1 : delayed single tooth implant placement in the esthetic zone on a patient**
- **10:30 -11:00 coffee break**
- 11:00 -13:30 **hands-on I:** decisions process for the prosthetic protocol on immediate implant placement abutment & provisional crown emergence profile configuration, abutment fabrication,...
- **13:30 -15:00 lunch**
- 15:00 -17:30 **lecture II : new trends & concepts treating single tooth implants**
 - Delayed implant placement criteria & concept
 - ideal implant placement
 - soft tissue management surgically to prosthetically guided
- **17:30 -17:45 coffee break**
- 17:45 -19:00 **lecture II : new trends & concepts treating single tooth implants**
 - timing & concept for abutment selection
 - emergence profile configuration & concept

management immediate
implant placement in
fresh extraction sockets

delayed implant
placement, the control
of volumes

This course focuses in both areas of treating implants on the management of the delayed and immediate implant placement. **Eventhough both treatment alternatives look similar there are different in concept and management which will be convered in this high advanced implant course.**
